# APPLICATION FOR PERMIT UNDER POLLUTION CONTROL ACT, 1967 (Effluent)

*Preamble*—The Climax Molybdenum Corporation of British Columbia is applying for a permit to upgrade the tailings disposal operation, as previously used in 1968-72, at its property at Kitsault, on Alice Arm. Oceanographic and biological studies were carried out in 1974 and 1975 to determine the impact of past operations and to assist in developing better techniques of disposal and to ascertain the future impact of the mining operation. A diversion structure is proposed on Lime Creek to facilitate the controlled deposition of the tailings on the bottom of the inlet at mean tidal depths in excess of 150 feet below the surface. The outfall system design will include all practical precautions to increase the settling characteristics of the effluent. A monitoring surveillance program will be executed in accordance with the oceanographic observations to ensure that no unforeseen adverse conditions arise.

THIS APPLICATION is to be filed with the Director, Pollution Control Branch, Parliament Buildings, Victoria, B.C. Any person who qualifies as an objector under section 13 (2) of the *Pollution Control Act, 1967* may, within 30 days of the date of application, or within 30 days of the date of publication in *The British Columbia Gazette* or in a newspaper, or, where service is required, within 30 days of the serving of a copy of the application, file with the Director an objection in writing to the granting of a permit, stating the manner in which he is affected. Those who do not so qualify may file with the Pollution Control Board an objection in writing under section 13 (6), in the same manner and time period as described above.

Climax Molybdenum Corporation of British Columbia, Limited, of 535 Thurlow Street, Vancouver, B.C., hereby applies to the Director for a permit to discharge effluent from a molybdenum concentrator located at Kitsault, into Lime Creek and thence through special diversion and outfall works to Alice Arm, which flows southwest and discharges into Observatory Inlet, and gives notice of application to all persons affected.

The land upon which the works are located is Lot 6480 (I.W. Fr.), Lot 6482 (I.W. No. 4), Lot 6477 (F and F No. 4), Lot 6479 (I.W. No. 1), Mineral Claims Access-18, Access-17, M.A.-6 Fr., Jan-1 Fr., Jan-14, Access-8, M.A.-1 Fr., Jan-20,

Jan-22, Jan-24, Kennco Access-25, Kennco Access-24, Access-30, Access-31, Joy-10, Joy-9, Lots 6930 and 64, Cassiar District.

The discharge outfall works shall be located approximately 1,700 feet south of the mouth of Lime Creek.

The quantity of effluent to be discharged is as follows: Average annual daily discharge (based on operating period), 5,000,000 imperial gallons. Maximum daily discharge, 6,000,000 imperial gallons.

The operating period during which the effluent will be discharged is continuous.

The characteristics of the effluent discharged shall be equivalent to or better than total suspended solids, 400,000 mg/l; pH, 6.0-10.0, all dissolved constituents to be within Level C Marine Water Pollution Control Objectives.

The type of treatment to be applied is by discharge of tailings at a mean tidal depth of 150 feet through outfall works designed to maximize settling.

I, John Pousette, Administrator-Treasurer, hereby certify that a copy of this application has been received by the Regional District of Kitimat-Stikine.

This application, dated on the 7th day of April 1976, was posted on the ground in accordance with the Pollution Control Regulations.
